

## LED DAYLIGHT SYSTEMS

 **Deco  
DayLight** *Enlightens your life*

### Dutch Design

Deco DayLight has developed and designed, a sustainable and innovative LED system that adds a daylight effect with a natural view to dimly lit areas, thus creating a healthier environment and saving energy. The virtual LED windows with high resolution photo images of natural landscapes and skies are not only very decorative and therefore a feast for the eyes, but also provide a sense of well-being and balance.

Deco DayLight wants to create with its LED daylight systems a healthy, decorative, exclusive and beautiful living and working environment.

The Deco DayLight LED systems are only 28 mm thick and can be mounted on every wall and every ceiling, also in suspended ceilings. Furthermore the Deco DayLight LED systems deliver a significant contribution to a sustainable world.

### Insufficient daylight can lead to:

- Health complaints and disruption of biorhythms
- Concentration problems and fatigue
- Feelings of discomfort and even depression
- Reduction of productivity and efficiency

### Deco Daylight partnership with Janszoon Maritiem

*The choice of Deco DayLight to work closely together with Janszoon Maritiem, is due to the fact that they have an outstanding worldwide expertise an experience in the nautical industry. Their knowledge goes from luxury yachts to large container ships and from nautical parts to shipyards, and beyond. Based on this cooperation, our daylight systems with a view on nature can be introduced to the nautical world, and they can start to profit from their benefits.*

### **Background of the Deco DayLight LED systems**

A sufficient daylight experience has a very positive impact on the functioning and wellbeing of man. Also a view on a beautiful landscape or cloudy skies has a tranquilizing effect and gives a sense of balance and harmony.

Modern man spends almost ninety percent of the day in artificial lit spaces, whether at home, at work or in any other indoor environment.

## **Applications for the Deco DayLight LED systems in Yachts and Cruise Ships**

A Deco DayLight LED system is applicable in any space where insufficient or no direct daylight is available. This lack of daylight can be increased through the season and the presence of clouds, something that often occurs in some parts of the world and at sea.

In Yachts and Cruise ships there is little free space behind the ceilings and walls, because these areas are filled with plumbing pipes, cables and other necessary devices. Since the Deco DayLight LED systems are the thinnest systems available in the market, they can be integrated very easy in yachts and other ships, and will provide the passengers an outspoken feeling of luxury, comfort and wellbeing.

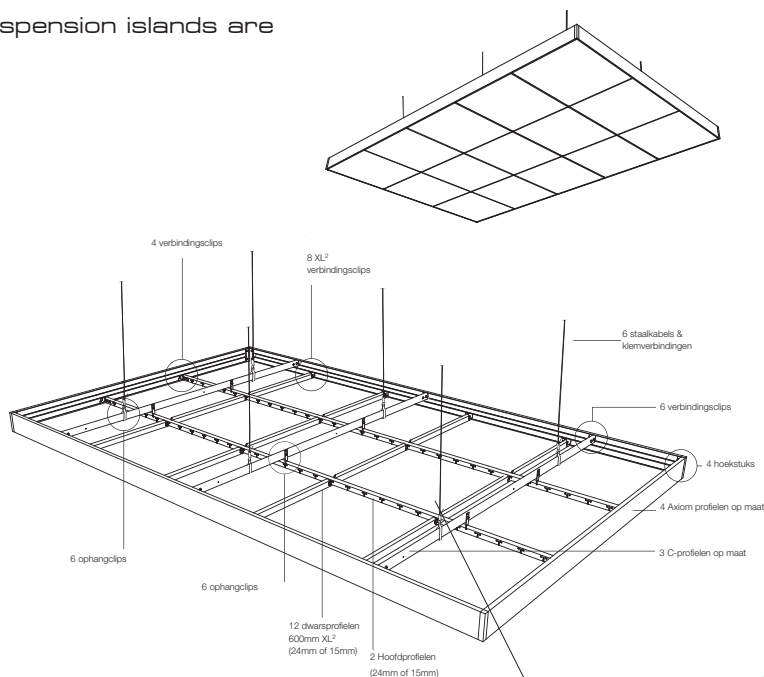

**Deco DayLight LED systems** in yachts will generate many benefits and positive effects, such as:

- Retrieves the daylight and nature inside
- Provides a sense of well-being & balance
- Improvement of luxury and comfort
- Decorative & creates a sustainable image
- Realizes a healthy living environment
- Easy to integrate in every ceiling and wall of yachts

The Deco DayLight ceiling system fits seamless in a suspended ceiling of 120 x 60 cm. But it can be mounted anywhere using the U-hanger or suspended thread tool, even under an angle.

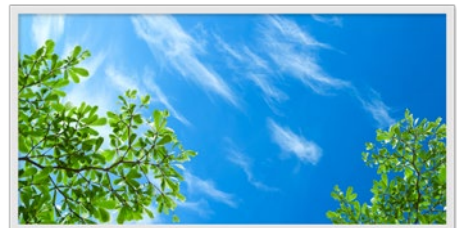

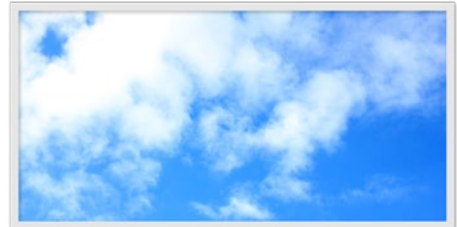

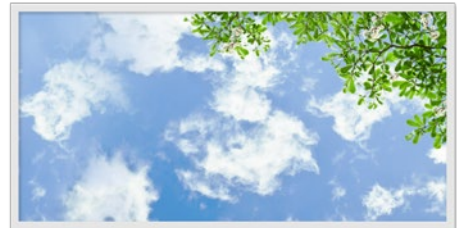

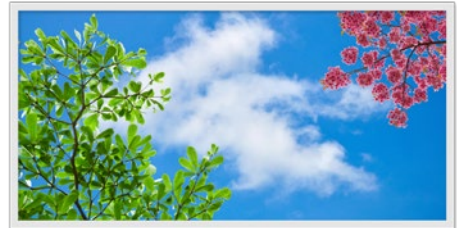

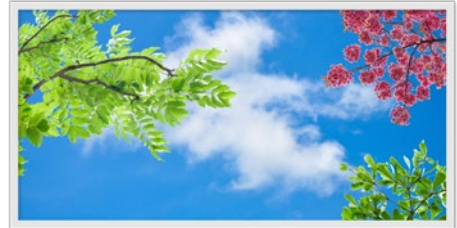

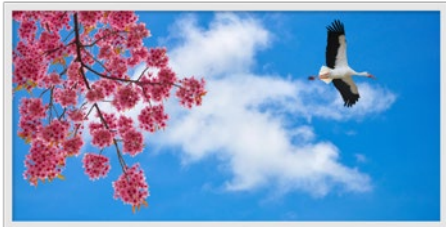

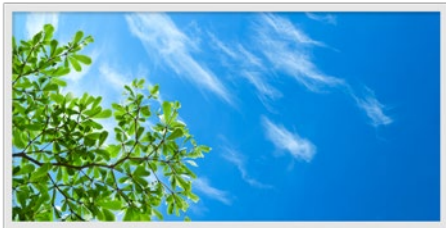

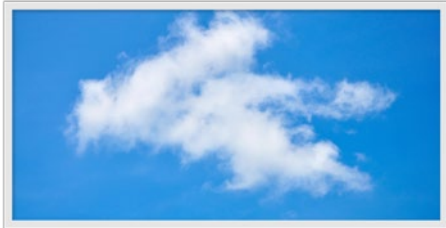

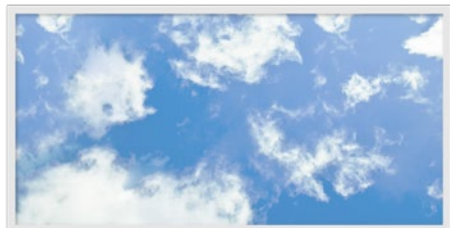

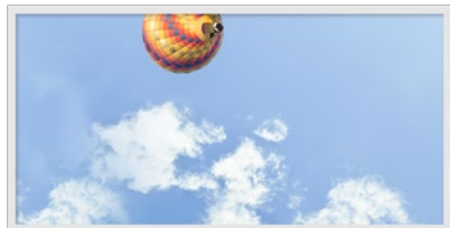

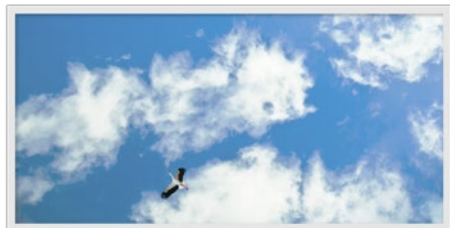

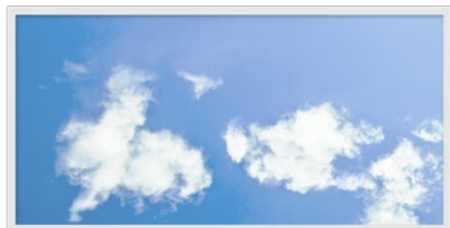

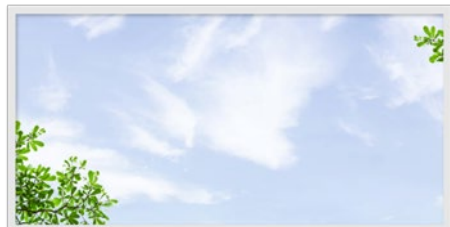

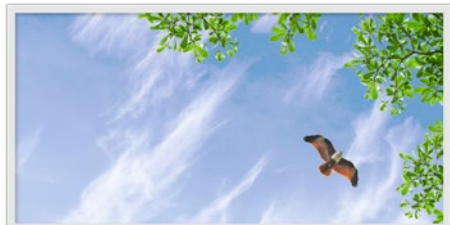

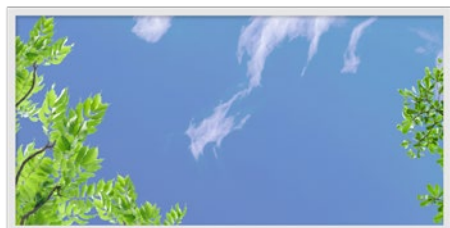

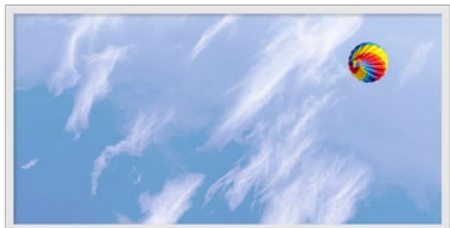

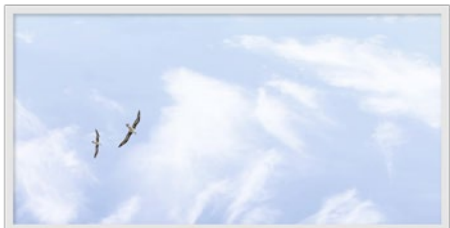

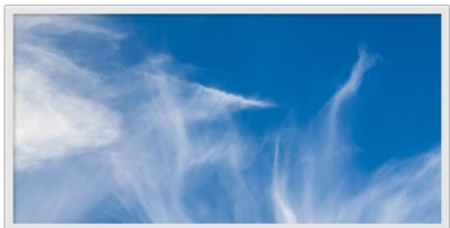

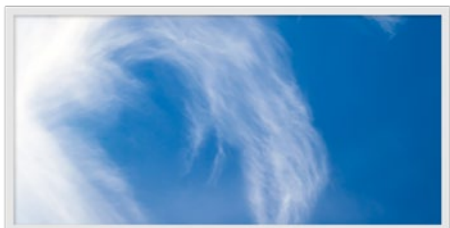

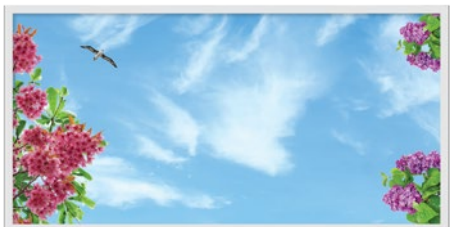

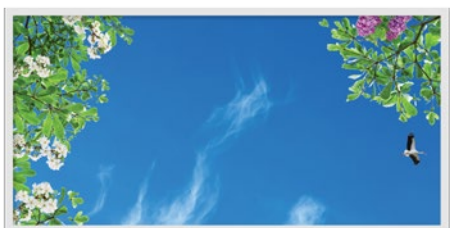

Standard suspension islands are available

## WALL

The Deco DayLight LED wall systems are developed, to create a realistic illusion of a window. Sharp and high resolution images are printed with state of the art techniques, on high quality acrylic panels. The high Lux backlit results in an amazing view on natural scenes. The photo panels can easily be exchanged by using the snap open edges of the frame, thus creating a complete new view.

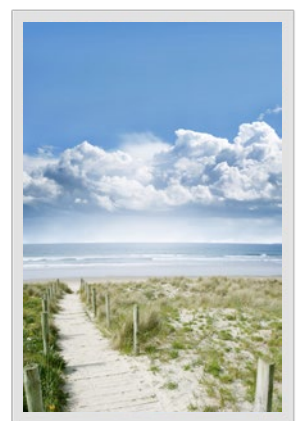

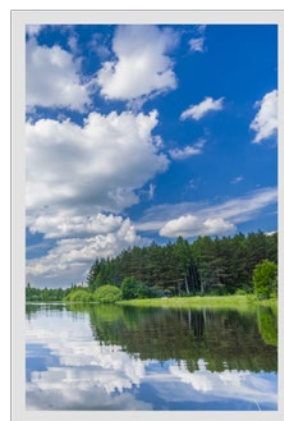

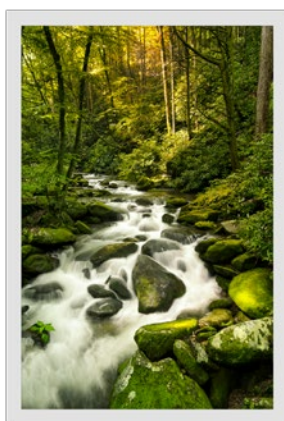

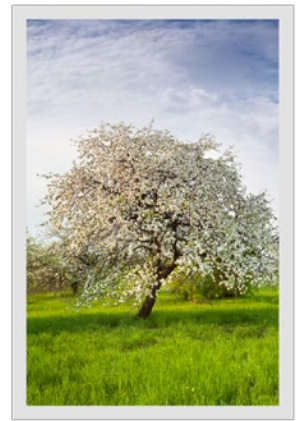

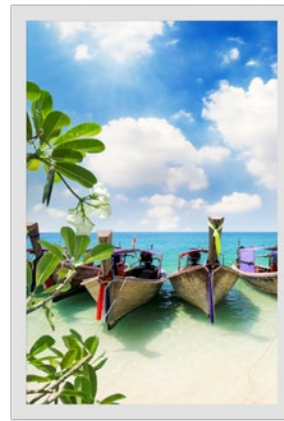

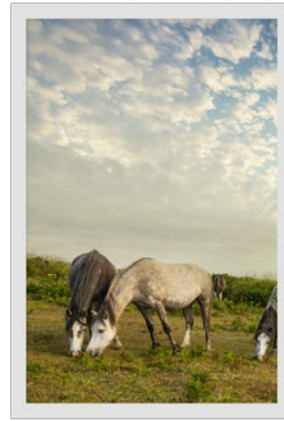

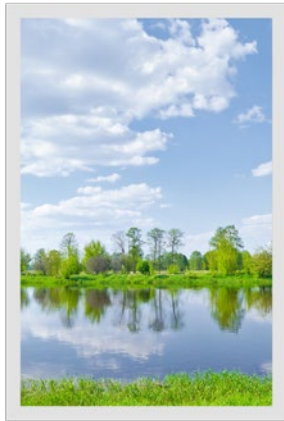

The installation of the LED wall panel is easy by using the specially designed mounting system.

Only 6 screws are enough for firm fixation, even under an angle.

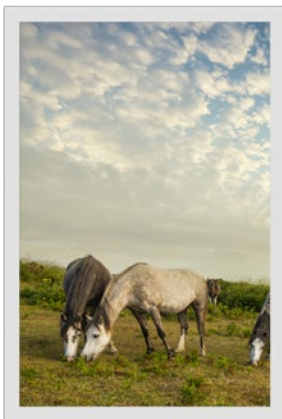

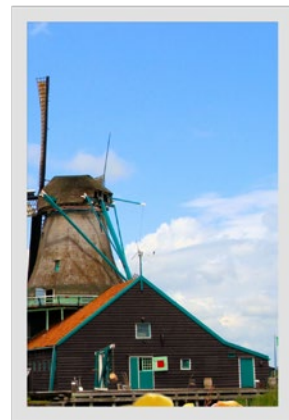

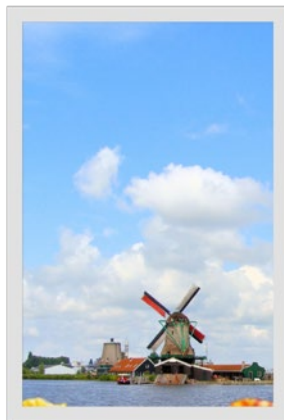

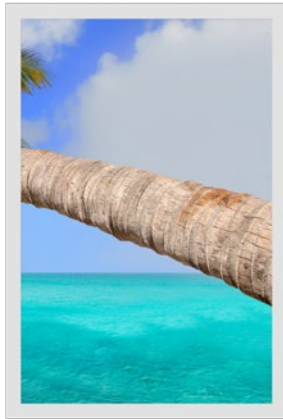

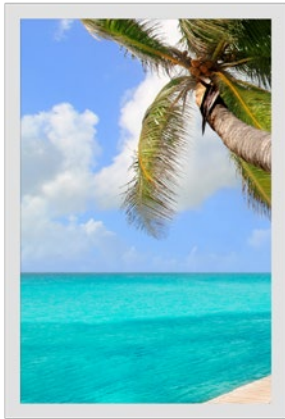

The panels can also be mounted in landscape.

**DIMENSIONS**

Ceiling Systems      59.5 x 59.5cm / 59,5 x 119,5cm  
 Wall Systems      80 x 120cm

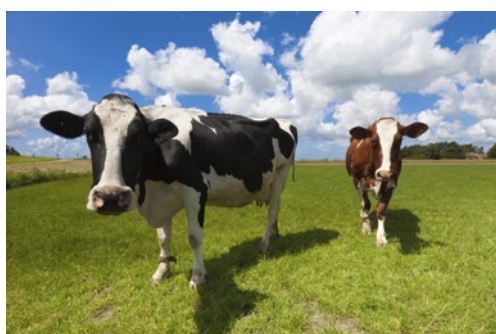

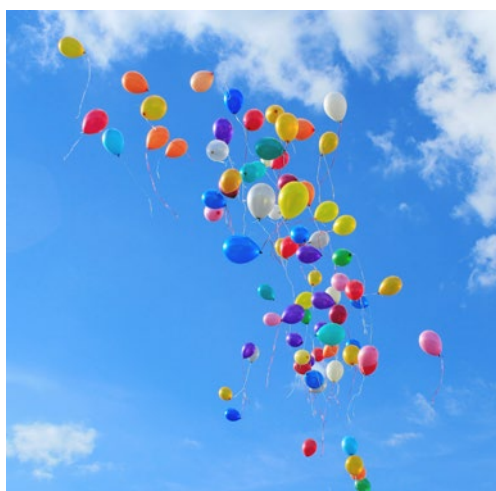

**SPECIAL DIMENSIONS**

Deco DayLight LED systems can be produced in any size. Please contact us for specifications and pricing.

**PERSONALIZED PHOTOGRAPHY**

Besides choosing from our image library, you can also decide to apply personalized photo images according your own wishes and requirements. If you send photos to us, they must meet certain minimum requirements. For example, the resolution [megapixels] and size of the photo file are important. We work closely together with professional photographers, who can take care of your specific photo assignments.

If you want to use this option, we kindly request you to contact us.
